

## *ARLM-200 Auto Round Bottle Labeling Machine*

To label plastic or glass bottles, powerful and highly precise labeling systems are needed. Flat, oval, cylindrical – a wide range of formats must be labeled, whether at pharmaceutical labeling, in the food and beverage industries or in the production of cosmetics. In the beverage industry especially, applying labels is no easy task: Despite having traveled through a drying system, the bottles are often not just moist but practically wet.

For many high-volume consumer products or small-format products, high speeds and throughputs need to be achieved. This requires high-performance systems. Often it is also necessary to align the labels, for instance to visually match the position of a wrap-around label to the position of an additional lid label. Our labeling systems perfectly align glass and plastic bottles so that labels are accurately applied.

### **Specifition**

<b>Model</b>	<b>ARLM-200</b>
Labeling speed	10-30 pcs/min
Label size	L:30-200mm
	W:20-150mm
Bottle diameter	Φ30-100mm
Labeling accuracy	±1
Max.roll out diameter	Φ260mm
Max.roll inner diameter	Φ75mm
Voltage	110V/220V 50/60HZ
Power	55W
