

HY-450 L Type Automatic Shrinking Wrapping Machine

Automatic L Sealers use a conveyor fed automatic operation. Soft feed conveyors carry products into the system and places them inside the folded shrink film. An adjustable sealing arm raises and lowers as products move through the system. Once sealed, the closed pouch is then moved into a shrink tunnel, shrinking and tightening the film.

L-Sealer Shrink Wrapping Machines create poly bags of heat sensitive shrink film around your product. An attached Shrink Tunnel then applies heat to the bag, shrinking and tightening the film. L-Sealing Shrink Wrappers are available in both automatic and semi-automatic formats. L-Sealers are perfect low volume shrink packaging solution able to seal up to 35 packages a minute.

Specification

Model	HY-450
Packing speed	0-15 m/min
Package size	Width+height≤400mm
	Length+height≤480mm
Film width	≤480
Outer diameter	≤290
Calculation film width	width+height+120mm
Film material	POF PVC PP
Total power	1.5KW
Power supply	220KW 50/60HZ

Model	HY-4525
Packing speed	0-15 m/min
Film material	POF PVC PP
Total power	9.6KW
Power supply	380V Three phase 50/60HZ
